Powered by retro VX CPU cores, Dstraint 2 is a stylish, vibrant, first person co-op stealth action title for PC and Mac: "It's the most interesting stealth game out there" - IGN. Its player survives with the help of a partner after killing some bad guys, and once you're paired up with a second player, the game demands cooperation. You won't survive alone. Story and Setting: Two survivors seek refuge in the ruins of the Great Capital. Their quest leads them to re-unite with the rest of the Dstraint Department. Having survived the destruction of the capital, the duo joins forces with a fellow survivor who still harbours romantic feelings for the married general, Marcus. The two are tasked with ruining the general's plans. Together, the three go on a journey from the ruins of the Great Capital to its former outskirts. The city where the General ruled is the most inhospitable area, as a source of resources and wealth. As the city's population dwindles, the General's authority diminishes. A man of the people in his past life, the now-wed Marcus protects the people and fights for what's rightfully theirs. The game is set in our real world, but a tad bit further off in our future. The story is an hour long - don't try to go crazy during the game. Features: • Dynamic Camera: Move the camera around the playing area. • Coop. Play as a 2 player team: Save each other and make strategic decisions together. • Solve puzzles together and use the environment and the player's surroundings to get past obstacles. • And much more... Otosclerosis surgery and occupational trauma. The incidences of acute and chronic rhinosinusitis, as well as the frequencies of dacryocystitis and of dry eye after otosclerosis surgery were examined in two groups of patients. One group (Group 1) of patients had surgery for indications other than otosclerosis, and the other (Group 2) had surgery for otosclerosis. In all cases, the Otospor-G device was used to perform a stapedectomy. The incidences of acute and chronic rhinosinusitis were similar for the two groups, as were the frequencies of postoperative dacryocystitis and of postoperative dry eye. The study failed to demonstrate any increased risk of postoperative rhinosinusitis in patients undergoing otosclerosis surgery.
