EXAMPLE WORKFLOW If you're using Photoshop Elements, you use the _Style_ command to apply various effects that create a mood. Some of the styles make drawing, painting, and collage styles; others are used to apply type effects or modify the lighting and colors of images. The new _Edit_ command comes with enough tools to help you work out many common image problems. However, the tools in this category are not as user-friendly as those in the drawing and painting categories.

If you are a professional photographer or graphic designer who loves using Elements, you will be most comfortable editing your photos right in the program. It isn't a program you can use to do commercial work, so if you would like to work with logos, advertisements or any other promotional materials, you will need to use Photoshop as well. Here's a list of what you'll need to edit your images in Elements if you intend to sell your images online, whether you're a pro or not. Beginners are welcome! The big thing that graphic designers and photographers face when beginning is that many techniques and tools can be overwhelming. When you first learn Photoshop, all you want to do is figure out how to work the tools. Everything you think about at the time is a new concept you're trying to understand. But there are certain steps you should take before diving right into the programs: Start off with basic documents. There are many free stock photos and images to use, you'll just have to look. Many of the free images you'll find online are in high-quality and can be used in your portfolio. Make sure your camera is working correctly. If your camera is not producing good results, you might not have the correct settings on. It's rare to damage a camera while taking pictures, but you might have certain settings that limit the quality of the 05a79cecff

b001448_0004){#fig4} ^1^ Using the urea--2-methylimidazoline complex (uMIm), the reactivity and activity of the imine intermediate **A** in the above reaction were monitored by ^31^P NMR spectroscopy in DMSO-*d*~6~/D~2~O (1:1) at 298 K. Conclusions {#sec3} ========== In summary, we have presented a scalable, water- and air-stable, and operational green catalyst for the oxidative condensation of carbonyl compounds with aldehydes in water and/or MeOH, containing no heavy metal and no quinone. A catalyst containing the POM (MIL-101)^[@ref7]^ was prepared from a rationally designed, biomimetic water-soluble, and organic-soluble precursor. The key components of the catalytic system are a cross-coupling precursor, an organic co-catalyst, and the POM. The POM catalyst is highly active in the reaction, even in the presence of water, and with a remarkable tolerance toward the solvent and the substrate. The reaction is general for a wide range of carbonyl compounds. The reactions display high chemo-, regio-, and diastereo-selectivity. The protocols are easy to operate, and the desired product can be obtained in good yields. The catalyst is recyclable. The biological relevance of the catalytic system was validated by the cross-condensation of 3-aminopyridine with three aldehydes and a carboxylic acid. The resultant 3-amino-1,2-dihydropyridine derivatives were demonstrated to have potential as pharmaceutical agents. Experimental Section {#sec4} =================== Materials and Methods {#sec4.1} --------------------- All chemicals were purchased from Sigma-Aldrich and were of analytical grade. Na~2~CO~3~ was used to neutralize acids.

Q: Global variabe not storing I am experiencing an issue with my application where a global variable is not storing/retrieving. I have decided to apply the recommended solution in the other stackoverflow questions asking similar questions. The problem is I am not entirely sure what i am doing wrong in my code, I am new to JavaScript. I cannot see where I am doing anything wrong or getting the wrong idea about how a global variable works. My console.log(groups) displays an empty array, so at the very least it is going into the loop. My HTML: The JavaScript: (function () { var groups = []; var groups_list = []; var games_list = []; var i = 1; setInterval(function () { for (i = 1; i ').addClass('game'); $('').addClass('game_h2').text(game.attr('title')); game.appendTo('.games'); groups.push(game); game = $('').addClass('game_image').attr('src', 'images/game_' + i + '.png'); game.appendTo('.game'); game = $('').addClass('game_text').text('Space Digger'); game.appendTo('.game_text'); game = $('').addClass('game_text').text('Vlambeer'); game.appendTo('.game_text'); game = $('').addClass('game_text').text('Starbreeze'); game.appendTo('.game_text'); groups_list.push(game); console.log(groups); //logs an empty array } }, 3000); })(); Any help would be greatly appreciated
