With that said, here are 10 things that you should know about Photoshop, so you can get a great job when you use it. Adobe Photoshop: 10 Photoshop Tips

1. Browse with Layer Blending Your computer's default display gives you a straight grid of pixels. You know that when you're looking at a webpage. Using Photoshop, you can see a whole new world of imagery. If you look closely at a webpage's background, you can see different textures and patterns. Technically, you can combine two photos that you've created with layers and change the transparency. This gives you a blended result of the two. You can do the same with layers.
2. Cut and Paste Pasting a layer with the same source is just like a regular cut or copy. You simply drag the layer and it moves to the new spot where you've dragged it. When you paste the layer at a different location, the layer is cut, or moved to a new spot.
3. Edit an Image at Multiple Scales You can resize an image for every single size in the scaled presets. You also can create new sizes, such as from 2 x 2 up to 4,000 x 4,000 pixels.
4. Adjust Exposure and Saturation You can control the light and dark points of an image, and even lower the light without introducing too much noise. You can also adjust the color with the Saturation Slider.
5. Rotate, Flip, Distort, and Mirror You can make a photo look like it's been turned 90 degrees, put a mirror on it, or flip it horizontally or vertically.
6. Recolor or Create a New Background You can paint new colors or designs on a photo. This is a great way to create your own look of the image. You can change the background color to lighten or darken the photo, too.
7. Change Size, Contrast, and Brightness You can turn an image into a different size—that would be 2,000 x 3,000 or 20 x 30 inches—or make a photo look brighter or brighter.
8. Add a New Layer You can create layers for every single image you work with. This layer contains a color, texture, pattern, or shape. For example, you can add a drop of water on
