### **What's New In?**

The Exchange server is the central component of an Exchange 2007 deployment. It is responsible for storing email for users in the domain and provides

access to that email through mailboxes. The server also manages data storage and replication for other servers in the domain.

**Advantages:** This test pack focuses on the Exchange 2007 server and provides a number of unique and useful tests for performing stress testing on it.

**Description:** The UBCD (Unified Boot CD) is an excellent software collection providing a well-rounded collection of tools, utilities and patches for both Windows and Linux operating systems. The CD contains tools to recover Windows system files, complete system recovery using Windows System Recovery CD or System Recovery CD, and FixMBR to restore the boot manager for a dual-boot configuration with multiple Windows installations. You can also use the tool "BootRepair" to automatically repair a corrupted or missing bootloader for Windows Vista, Windows 7 or Windows 8. To create a Windows 8 repair bootable USB flash drive, you can use the ISO to create the ISO image for Windows 8.

Windows 8 dual-boot repair with Windows 8 ISO Image Description: This test pack is a collection of tests for the x86 version of Windows 8 on a standard dual-boot configuration. You can select between two install options: Install the Windows 8 OS and set it as the default operating system and delete all Windows Oses. Install all of the Windows Oses on the hard drive. This test pack has been validated against an original Windows 8 ISO image downloaded from Microsoft and the tests have been proven to work on a dual-boot configuration. You can download and run the tests directly from the CD or you can save the CD images on your hard drive to run them later on. You can remove the unneeded files to save disk space or just leave them there. Please remember to backup your Windows 8 installation before you run the test pack! Please note: This is a demo version for Windows 8. I'm still working on a version for Windows 7 and it is coming soon. Advanced Reboot utility Description: Advanced Reboot is an

optional tool that lets you control the rebooting process of any Windows 7 or Windows Vista computer. It was written to simulate the actual event log from a standard Reboot. With Advanced Reboot, you can do several things to the computer. You can: Make the computer boot with a hotkey. Reboot with a hotkey. Clear the event log with a hotkey. Shut down with a hotkey. Start the computer with a hotkey. You can create a hotkey for your own computer by selecting one of the available options. Please remember to backup your Windows 7 or Windows Vista installation before you run this tool! Eventlog: Event Log allows you to view any log information. It allows you to view, compare, remove

## **System Requirements:**

Please note that we strongly recommend you update to the latest version of the graphics card drivers. OpenGL is not supported by your operating system.  
Windows 7 and higher: Minimum: OS: Windows 7 or Windows 8 (32 bit)  
Processor: Intel® Core™ i3-530 or AMD equivalent  
Memory: 2GB RAM  
Graphics: Intel® HD Graphics or AMD equivalent  
DirectX: DirectX 11  
DirectX: Version 9.0c  
Hard Disk Space: 1GB available space
